

## **Tim Gabrielson AV & Room Requirements**

### **Stage**

Purchaser is to provide an elevated stage with a minimum size of 8 feet in depth and 8 feet in width. (larger stage size is definitely accepted)

### **Room - Seating**

The best room arrangement for Tim's presentation is with the audience seated in theater style or round tables. Position the first row no more than 10 feet from the stage and try to avoid wrapping the audience around the sides of the stage. Place the stage on the long side versus the end of rectangular rooms, this creates the shortest distance between Tim and the attendees.

### **Sound**

Tim just needs the ability to patch into the main or house system using an XLR cable. Tim will also need one Wireless Handheld Microphone (stand not required).

If there is a sound engineer controlling the sound for your event, Tim will need three XLR inputs one is for the wireless (preferred) Handheld that is to be provided, his own Wireless Headset Microphone, and last but not least, an mp3 player.

### **Lights**

The minimum lighting requirements are simple just a good wash on stage. Facial expression is a large part of Tim's Show. Don't miss it with bad lighting!
